

# TLX Inverter Range

## Three phase transformerless inverter range from 6-15 kW

The TLX range includes TLX, TLX+, TLX Pro and TLX Pro+

**35 kg**

The weight of 6-15 kW

Ensuring easy and troublefree installation of high performance inverters

The TLX inverter series, with efficiency of 98% deliver maximum energy in all conditions. Transformer-less design, advanced electronics and optimised internal connections reduce potential energy losses.

Balanced three-phase AC output ensures grid compliance at all times and precise MPP tracking at 99.9% in steady conditions and 99.8% in dynamic conditions enable the inverter to harvest all the energy of the PV modules.

The TLX inverter is designed for high performance. Integrating 1000 V input range, 250-800 V MPP range and multiple DC inputs with each their own individually regulated

MPP tracker, allows for more modules in a series and longer strings, while providing greater flexibility in the PV setup.

The TLX Pro series includes master inverter technology capable of controlling up to 100 inverters from a single inverter.

Likewise, the integrated webserver, which allows you to control, monitor and adjust your PV system from any computer, comes standard on the TLX Pro.

The TLX inverter series includes the Danfoss Smart Technologies: a combination of features, which makes the TLX inverters unique in the market:

### EnergySmart™

Excellent MPPT Efficiency, 98 % conversion efficiency, 1000 V<sub>AC</sub> power burst and an excellent cooling concept provides high yield and earlier return on investment. High voltage input and reduced losses on the DC side. Early start up and late stop of power production result in maximised yield while exact cooling minimizes energy losses.

### DesignSmart™

A large number of independently regulated MPP trackers along with 1000 V<sub>DC</sub> and asymmetrical layout options allows for endless layout possibilities. This huge flexibility makes installations from residential to large scale plants possible.

### TrackSmart™

Advanced Digital Tracking algorithms with efficiency of 99.9 % creates conditions for accumulating the most energy possible, regardless of ambient conditions, physical obstacles or inclination challenges.

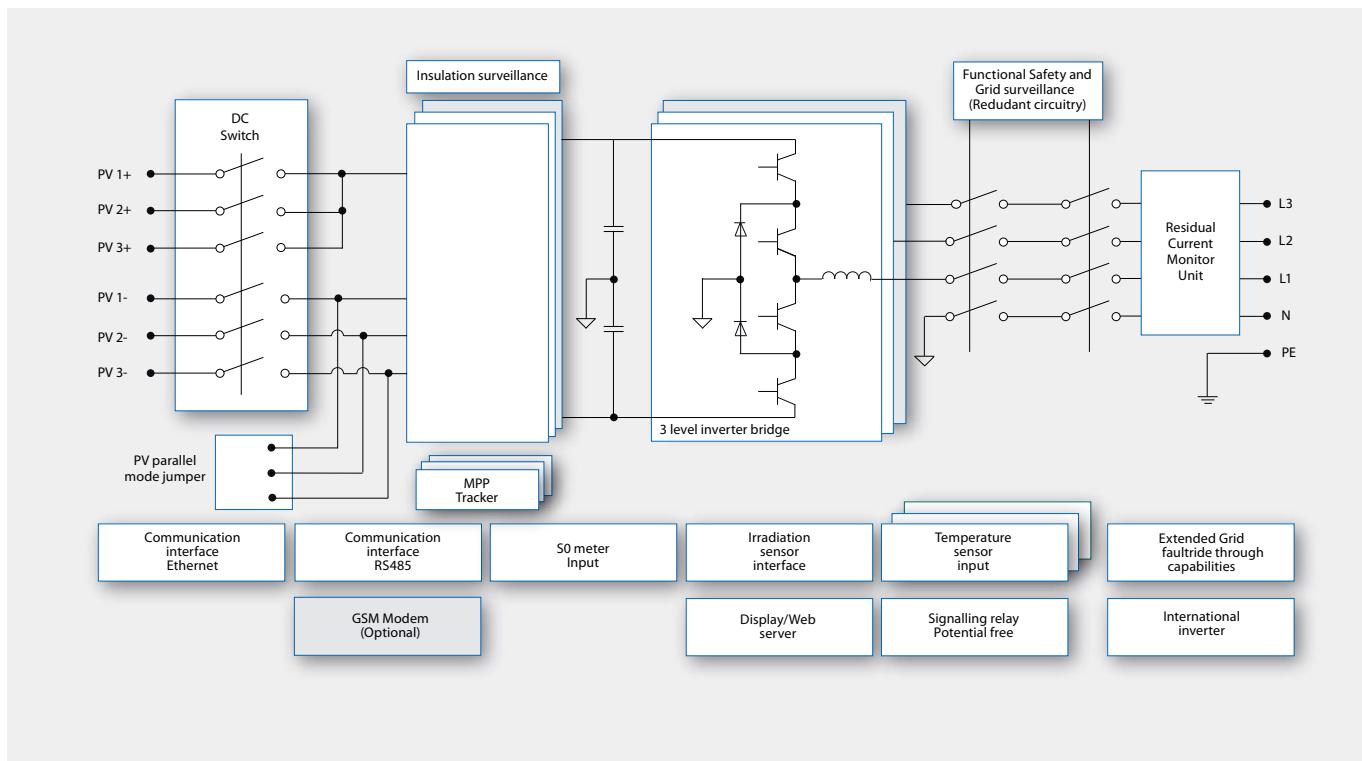

### \* ControlSmart™

Integrated monitoring and control options through the Master inverter and Web server allows for; management of up to 100 inverters from a single inverter, accumulation of data from all inverters as well as overview of individual inverter parameters, from any computer. Integrated data logging of 34 days detailed and 20 years of accumulated data reduces the need for additional monitoring equipment.

\* TLX Pro series only.
